

## Submission 10 – Confidential

DO NOT IMPLEMENT REMOTE ID! Current restrictions already make it difficult enough to fly and have fun while following the rules. Not only this but for the drone racing club which I participate in remote ID would be pointless as we are always flying within 100m and in visual line-of-sight of our drones. Furthermore our aircraft's are designed to be as light and compact as possible so adding a remote-ID module to that type of drone would be near impossible without a major decrease in performance.
