

Submission 41 – Ray

REMOTE ID is not required to achieve the desired goals discussed in this paper. This paper describes “the issue” being the safe operation of drones in Australia and leading to improved safety. I would like to challenge this statement, what unsafe operations have been reported to CASA or other bodies and what injuries have occurred because of it? How will the safety be improved by investing the tax payers money? There is no issue to be fixed or improved on.. This could and I believe will likely be perceived very poorly by the public as another tax payers wasted money. “The issue” proposed does not exist, and therefore the details following the fundamental problem statement do not matter eg ways of implementing RID.
