

## Submission 21 – Sue McIntyre

I would like to provide feedback on the use of drones for commercial deliveries. The concept is so wrong and will degrade the quality of life in cities. The idea that deliveries of takeaway food and minor grocery items etc will benefit anyone apart from the businesses involved is ridiculous. The noise and presence of our airspace being filled with these things will distress humans and urban bird life alike. Bird populations will be damaged, humans health will be affected by even easier access to junk food. Quality of life for everyone will be degraded by the pollution of our skies by these irritating, disturbing and unnecessary objects.

Your sincerely

Sue McIntyre.
