

## Submission 25 – Confidential

I am appalled that the government is considering approving the broad use of drones nationally without meaningful advance notice. This is particularly aggravating since it appears the pending approval makes no distinction between delivering coffee or crisps and delivering medicine or data necessary to fighting a bush fire. Putting a noisy, congested transport system in the sky above our homes without fully disclosing the costs and risks of this unprecedented invasion of our privacy and quiet enjoyment of our residences, is unacceptable. Accordingly, I disagree with this proposal without reservation.
