

Submission 32 – Paul Duggan

Strongly against this misuse of Australia as testing ground for Google initiative and misuse of Deloitte analysis to oversell economic benefits of predominantly fast food deliveries and whim purchases by drone. The Deloitte analysis projects infantile economic benefits from such use with most benefits occurring in military and industrial applications not the subject of this trial. Google is being disingenuous in its claim of environmental benefit of drone delivery and fails to account for impact of manufacturing and delivery of drones, powering costs and waste packaging. imagine the abuse of privacy and amenity as these things take hold, congest the sky, create urban noise pollution in once quiet backyards, and upset birds and other wildlife. People will become angry and there is risk of home made missiles and air shot being fired at them in annoyance. Imagine the annoyance factor when the stoner down the road order pizza by drone at 3 AM each night. And why is Google managing feedback loop? That stinks. No thank you.
