

Submission 41 - Confidential

With Brisbane and Hobart airports boasting massive expansion, and with unrelenting, low flying, health damaging and sleep depriving aircraft noise in Brisbane (80+ db every few minutes) and near Hobart airport, there is absolutely no case for introducing drones that will compound the already disastrous health-wrecking environmental noise over our homes. Land-owners should have the right to say whether or not our privacy and sanctity of our homes is stolen by even more air-borne noise. A poll should be conducted within every residential area to see whether or not the vast majority of affected residents give their consent. Wrecking our lives with more over-flight noise for delivering junk food and items that people are too lazy to access themselves. This idea means anyone can send a drone over backyards just for making noise fun, or even photographing us. Utterly ridiculous and dangerous where overhead power lines exist and risks of accidents.
